Appalachian State University

Scan here to read our fact sheet!

About Us:

Faculty and students at Appalachian State University are partnering with an environmental non-profit organization, CleanAIRE NC, to initiate community-engaged air quality monitoring. With no federal air monitors in Watauga County, we don't know enough about the air quality impacts of potential sources of pollution like heavy traffic, construction, quarries, or biomass burning. We are seeking High Country residents to join us in learning more.

Funding provided by App State's Research Institute for Environment, Energy, and Economics & Quality Enhancement Plan
